

## PRIMEUR DATA MOVER®

DISCOVER YOUR NEXT  
MFT SOLUTION

Communication today is the most important thing for any organization, also when we are talking about IT applications. In fact, being able to make different applications - developed, deployed and produced at different times, for different needs and by different providers - smoothly communicate with each other is fundamental to deliver a quick, secure and efficient operativity. Indeed, often the operativity, compliance and performance of the entire IT system are related to the capability of making “different things” communicate automatically, securely and efficiently, in order to work together as a system and not as isolated data silos. The first rule of this process is to have the right information and data, at the right time, in the right place.

## Information is power

An enterprise information system is not so different from any company organization. To work smoothly, both need clear communication standards and rules, need to share the right information, to the right people and/or applications, at the right time. If this can be difficult to apply in a daily manual routine, it is instead absolutely feasible when we are talking about information technology. Making different applications communicate harmonically and securely can dramatically change the overall performance of any organization.

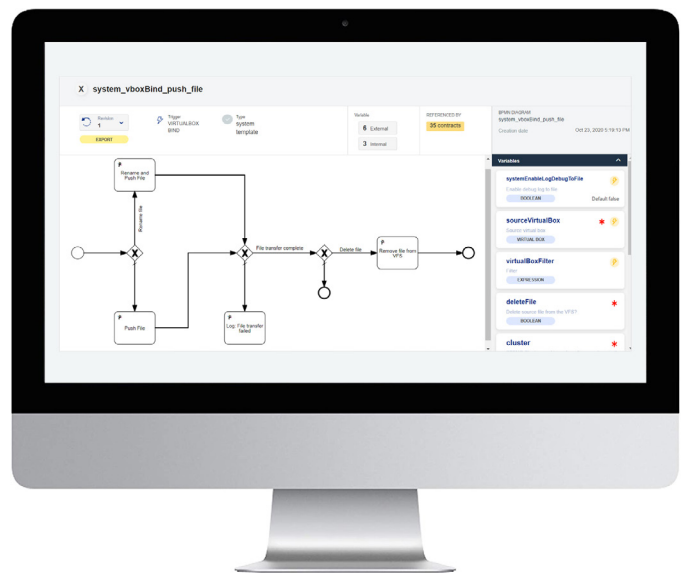

## PRIMEUR DATA MOVER®, make communication between applications easy

PRIMEUR DATA MOVER® is Primeur multi-protocol, multi-platform, managed and secure file transfer enterprise solution able to create a fluid and secure communication flow between different applications. PRIMEUR DATA MOVER® manages synchronous and asynchronous file transfer, never creating direct connection between data producers and data consumers.

Indeed, information is shared without modifying the applications that produce or consume data, thus maintaining the total independence of the applications involved in the process. This process allows to add, swap, change or modify the IT and application framework with an unmatched simplicity and efficiency, managing input, output, store-and-forward and internal file transfers with a secure and flexible tool.

DATA MOVER® relies on PRIMEUR DATA ONE® technology, leveraging the Contract Oriented Architecture® (COA®) methodology and its asynchronous event-driven architecture to deliver a first-class MFT solution.

PRIMEUR DATA MOVER supports standard protocols such as: SFTP, FTPS, HTTPS, PeSIT, proprietary ones and third-party protocols like IBM Connect:Direct. It runs on distributed environments, Mainframe and on the Cloud.

## The Contract Oriented Architecture®, transform your needs into dataflows

PRIMEUR DATA MOVER® relies on the Contract Oriented Architecture®, a methodology developed by Primeur based on 30 years' experience working with some of the most important Fortune 500 companies worldwide.

With the Contract Oriented Architecture®, MFT flows are described and managed with contracts defining the sets of rules, policies and constraints - entities, events and actions - that regulate each step of an integration process: input, mediation and output. The Contract Oriented Architecture simplifies the integration design breaking down complex flows in smaller activities, promoting reusability and separation of duties and minimizing the risk of errors and time-consuming operations.

The COA® thus allows total control, savings and operative advantages, such as:

1. Easily change each phase without impacting Data Producers or Consumers.
2. Reuse contracts (or part of them) in other integration needs.
3. Know in advance how data moves, anticipating and isolating operative problems.

### Benefits

- Keep applications independent ➡ Modify, replace or delete applications easily
- Decoupling between data producers and consumers ➡ Agility to seamlessly update integration flows
- Flexible deployment ➡ On-premises and on Cloud deployment
- Modern and intuitive user experience ➡ Fast and collaborative on-boarding
- Isolating senders and receivers ➡ Highest level of security
- Knowing in advance how data moves ➡ Isolation and anticipation of operative problems
- Secure management of data traffic ➡ Alignment with the highest security standards

Feel free to contact us at [datamover@primeur.com](mailto:datamover@primeur.com) for more information and to schedule your demo.*

### About Primeur

We are a Smart Data Integration Company, with an unconventional philosophy. For more than 30 years we have been serving some of the most important Fortune 500 companies with our unconventional approach, our problem-solving attitude and our software solutions.

**We make Data Integration simple, accessible, secure and sustainable over time.**

Our goal is to help Companies to manage and control the data they generate, use and analyze without interfering with the existing IT systems and applications.

We help Companies to work better and smoother, preserving their existing systems and IT investments.

The results are better operations, driven by better and faster decisions, delivering a better service with a lower investment.
